# Certificates on the Course Completion Page

Course Completion Page · https://www.mooplugins.com/docs/course-completion-page/certificates-on-the-course-completion-page/

Course Completion Page can show an issued course certificate as part of the Student's completion experience. The plugin currently supports **Custom certificate** `mod_customcert`.

## When does the certificate section appear?

The certificate section is shown only when:

- The **Certificates section** is enabled for the course
- The Student has an issued certificate from `mod_customcert`
- The certificate is available for that completed course

If any of these conditions are not met, the certificate section is omitted from the completion page.

## What can Students do with the certificate?

When an issued certificate is available, Students can:

- **Preview Certificate -** Opens the certificate so the Student can view it before downloading.
- **Download Certificate -** Downloads the issued certificate as a PDF.

The Course Completion Page does not generate a separate certificate. It displays the certificate already issued by the supported Moodle certificate activity.

## Why is the certificate section not showing?

The section may be hidden when:

- `mod_customcert` is not installed or enabled

- The certificate section is disabled
- The course does not contain a supported certificate
- The Student has not been issued a certificate
- The certificate is not available for that Student

Because Course Completion Page only displays available information, it does not show an empty certificate section.
